INSIGHT AND RECOMMENDATIONS

⚠️ High-Risk Employee Profile

Based on the data analysis, employees who are more likely to leave the company share the following characteristics:

- **Working Overtime:** Have an attrition rate approximately 3 times higher than employees who do not work overtime.
- **New Employees (0–2 Years):** Employees in this group are the most likely to leave the company early.
- **Single Employees:** Have a higher attrition risk compared to married employees.
- **Young Employees (18–29 Years Old):** Younger employees account for a significant proportion of employee resignations.
- **Low Income:** Lower salaries may contribute to employees' decisions to leave the company.

💡 HR Recommendations

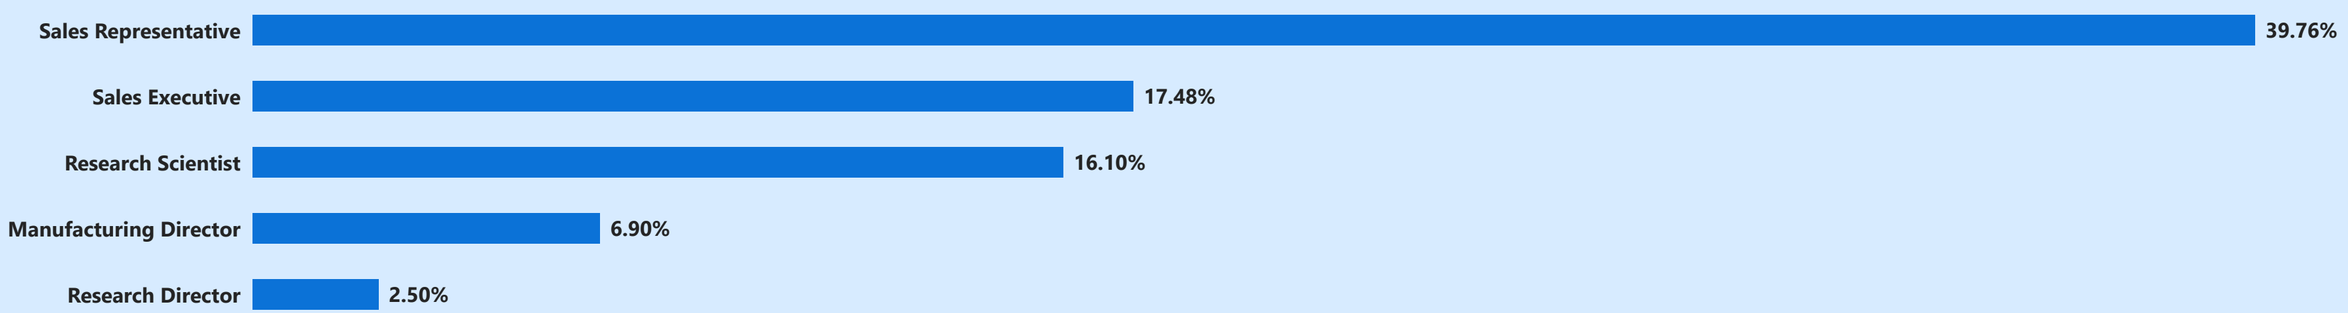

1. Manage Working Hours: Limit overtime and ensure a balanced workload. Offer flexible working arrangements, such as hybrid work or work-from-home (WFH) options, for employees who live far from the workplace.

2. New Employee Retention Program: Establish mentorship programs and improve the onboarding process for employees with 0–2 years of service to help them feel valued and supported.

3. Salary Review: Review salary structures for positions with the highest attrition rates, such as Sales Representatives and Laboratory Technicians.

4. Young Employee Engagement: Introduce career development programs specifically designed for young and single employees to maintain their motivation and encourage them to stay with the company.
